

5G International music jam

- with online audio theramins instruments
- Experimental Musical Instruments :Designed and Invented in LONDON, UK

The Theremin is one of the oldest electronic musical instruments*. As

with all Theremin instruments, the Moog Theremini is played by interacting

with two electronic antennae using subtle hand gestures. One antenna is a

horizontal loop used to control the Volume; a vertical rod antenna is used

to control the Pitch.

Due to the nature of these antennae, the Theremini is very sensitive

both to the player AND its environment. Special care should be usedn with 5G and Ericsson Music Garage

when preparing a space to perform with your Theremini.
